Medical RAG Disease Reference Corpus

Structured test data for retrieval-augmented generation (RAG) pipelines

Corpus size	117 condition / topic entries
Coverage	Skin, gynecology, cardiovascular, neurology, digestive, respiratory, endocrine, renal, musculoskeletal, eye/ENT, infectious disease, mental health and cancer
Record fields	Condition • specialty • common symptoms • example treatment/medicine classes • red flags
Intended use	Chunking, embedding, retrieval, metadata filtering, citations and answer-generation testing

Important scope note: There is no single practical list containing every disease, rare disorder, subtype and newly described condition. This document is a broad starter corpus of common and high-impact conditions, not an exhaustive medical encyclopedia.

Medical safety notice: This is educational test material, not a diagnostic tool or treatment guide. Symptoms overlap and medicine choice depends on diagnosis, age, pregnancy status, allergies, other medicines, organ function and local guidance. Medicine names/classes are examples only; no doses are provided. Do not use this PDF to self-diagnose, prescribe or delay professional care. Emergency warning signs require urgent local medical services.

Suggested RAG metadata

For better retrieval, store each entry as its own document/chunk with metadata such as condition_name, specialty, symptoms, treatment_examples, red_flags, source_type, reviewed_date and disclaimer. Preserve the emergency warnings in the retrieved chunk rather than stripping them during preprocessing.

Condition reference entries

Skin / Dermatology

Acne vulgaris

Specialty: Skin / Dermatology

Common symptoms: Pimples, blackheads or whiteheads, inflamed bumps, sometimes painful nodules on face, chest or back.

Example treatment / medicines: Benzoyl peroxide, topical retinoids such as adapalene, azelaic acid; clinicians may use topical/oral antibiotics or hormonal therapy for selected cases.

Red flags / urgent care: Severe painful nodules, scarring, sudden severe onset, or significant distress.

Atopic dermatitis (eczema)

Specialty: Skin / Dermatology

Common symptoms: Dry, itchy, inflamed skin; recurring patches; sometimes cracking or oozing.

Example treatment / medicines: Regular emollients, topical corticosteroids for flares; calcineurin inhibitors or other prescription therapies for selected cases.

Red flags / urgent care: Fever, rapidly spreading redness, severe pain, pus, or eye involvement.

Psoriasis

Specialty: Skin / Dermatology

Common symptoms: Well-defined scaly plaques, often on elbows, knees or scalp; itching; nail changes may occur.

Example treatment / medicines: Emollients, topical corticosteroids, vitamin-D analogues; phototherapy or systemic/biologic medicines for more extensive disease.

Red flags / urgent care: New widespread redness, pustules, fever, or painful swollen joints.

Urticaria (hives)

Specialty: Skin / Dermatology

Common symptoms: Raised itchy wheals that change location; individual lesions usually fade within a day.

Example treatment / medicines: Non-sedating antihistamines are commonly used; persistent cases need clinical assessment.

Red flags / urgent care: Swelling of tongue/throat, breathing difficulty, faintness: emergency care.

Cellulitis

Specialty: Skin / Dermatology

Common symptoms: Tender, warm, swollen, expanding red area; possible fever.

Example treatment / medicines: Prescription antibiotics selected according to severity, allergies and local guidance.

Red flags / urgent care: Rapid spread, confusion, severe pain, fever, facial/eye involvement, or immunocompromise.

Impetigo

Specialty: Skin / Dermatology

Common symptoms: Superficial sores or blisters, often with honey-coloured crusts.

Example treatment / medicines: Hygiene and clinician-selected topical or oral antibiotics depending on extent.

Red flags / urgent care: Fever, rapidly spreading infection, eye involvement, or newborn affected.

Fungal ringworm (tinea corporis)

Specialty: Skin / Dermatology

Common symptoms: Ring-shaped itchy scaly rash with a more active edge.

Example treatment / medicines: Topical antifungals such as terbinafine or clotrimazole; scalp/nail disease may require oral treatment.

Red flags / urgent care: Scalp involvement, extensive disease, immunocompromise, or failure to improve.

Athlete's foot (tinea pedis)

Specialty: Skin / Dermatology

Common symptoms: Itching, scaling, cracking or peeling between toes or on soles.

Example treatment / medicines: Topical antifungals; keep feet dry and change socks.

Red flags / urgent care: Marked swelling, pus, fever, diabetes with foot wounds, or spreading redness.

Scabies

Specialty: Skin / Dermatology

Common symptoms: Intense itching, often worse at night; small bumps or burrows, commonly between fingers and at wrists.

Example treatment / medicines: Permethrin or another clinician-recommended scabicide; close contacts and bedding may need coordinated treatment.

Red flags / urgent care: Infant, crusted rash, secondary infection, or outbreak in a care facility.

Vitiligo

Specialty: Skin / Dermatology

Common symptoms: Well-defined patches of skin losing pigment; usually not painful or itchy.

Example treatment / medicines: Dermatology assessment; options can include topical anti-inflammatory medicines, phototherapy and camouflage.

Red flags / urgent care: Rapid change or diagnostic uncertainty; generally not an emergency.

Rosacea

Specialty: Skin / Dermatology

Common symptoms: Facial flushing, persistent redness, visible small vessels, acne-like bumps; sometimes eye irritation.

Example treatment / medicines: Trigger avoidance, gentle skin care, clinician-selected topical agents; oral treatment for selected cases.

Red flags / urgent care: Eye pain, light sensitivity, or vision change.

Seborrheic dermatitis

Specialty: Skin / Dermatology

Common symptoms: Greasy or dry flakes and redness on scalp, eyebrows, sides of nose or chest.

Example treatment / medicines: Anti-dandruff shampoos and topical antifungal or anti-inflammatory treatments as advised.

Red flags / urgent care: Severe, persistent symptoms or signs of infection.

Gynecology / Endocrine

Polycystic ovary syndrome (PCOS)

Specialty: Gynecology / Endocrine

Common symptoms: Irregular or absent periods, acne, excess facial/body hair, scalp hair thinning; sometimes fertility difficulty.

Example treatment / medicines: Lifestyle support; combined hormonal contraception, metformin or ovulation-induction medicines may be considered based on goals and assessment.

Red flags / urgent care: Very heavy bleeding, severe pelvic pain, or prolonged absence of periods requiring assessment.

Gynecology

Endometriosis

Specialty: Gynecology

Common symptoms: Painful periods, chronic pelvic pain, pain with sex or bowel movements, sometimes infertility.

Example treatment / medicines: NSAIDs for pain when safe; hormonal treatments; surgery for selected cases.

Red flags / urgent care: Sudden severe pelvic pain, fainting, fever, or possible pregnancy with pain/bleeding.

Uterine fibroids

Specialty: Gynecology

Common symptoms: Heavy or prolonged menstrual bleeding, pelvic pressure, frequent urination; sometimes no symptoms.

Example treatment / medicines: Iron if deficient; clinician-selected hormonal or non-hormonal bleeding treatments; procedures/surgery for selected cases.

Red flags / urgent care: Very heavy bleeding with dizziness, fainting, or severe acute pain.

Dysmenorrhea (painful periods)

Specialty: Gynecology

Common symptoms: Cramping lower abdominal pain around menstruation, sometimes nausea or headache.

Example treatment / medicines: NSAIDs when safe; hormonal contraception may help after clinician review; heat can relieve symptoms.

Red flags / urgent care: New severe pain, pregnancy possibility, fever, or pain that progressively worsens.

Gynecology / Infection

Vaginal candidiasis

Specialty: Gynecology / Infection

Common symptoms: Vulvar itching, soreness, redness and thick discharge; symptoms overlap with other infections.

Example treatment / medicines: Antifungal medicines such as topical azoles; oral fluconazole is suitable only for some patients and situations.

Red flags / urgent care: First episode with uncertainty, pregnancy, fever, pelvic pain, recurrent symptoms, or foul-smelling discharge.

Bacterial vaginosis

Specialty: Gynecology / Infection

Common symptoms: Thin discharge and fishy odour; some people have no symptoms.

Example treatment / medicines: Clinician-prescribed metronidazole or clindamycin when indicated.

Red flags / urgent care: Fever, pelvic pain, pregnancy concerns, or suspected sexually transmitted infection.

Pelvic inflammatory disease (PID)

Specialty: Gynecology / Infection

Common symptoms: Lower abdominal/pelvic pain, abnormal discharge, pain during sex, fever or irregular bleeding.

Example treatment / medicines: Prompt clinician-prescribed combination antibiotics; partners may need evaluation for STIs.

Red flags / urgent care: Urgent assessment is needed, especially with pregnancy, severe pain, vomiting, fainting or high fever.

Cervicitis

Specialty: Gynecology / Infection

Common symptoms: Abnormal discharge, bleeding after sex or between periods; can be asymptomatic.

Example treatment / medicines: Testing for causes and clinician-directed antibiotics when indicated; partner management may be needed.

Red flags / urgent care: Fever, pelvic pain, pregnancy, or significant bleeding.

Gynecology / Women's health

Menopause symptoms

Specialty: Gynecology / Women's health

Common symptoms: Hot flashes, night sweats, sleep changes, vaginal dryness, mood or cycle changes.

Example treatment / medicines: Lifestyle measures, vaginal moisturisers/lubricants; menopausal hormone therapy or non-hormonal options after individualized risk review.

Red flags / urgent care: Unexpected bleeding after menopause or chest pain/shortness of breath.

Gynecology / Emergency

Ectopic pregnancy

Specialty: Gynecology / Emergency

Common symptoms: Possible pregnancy with one-sided pelvic pain, vaginal bleeding, shoulder-tip pain or dizziness.

Example treatment / medicines: Emergency evaluation; treatment may involve medication or surgery depending on stability and findings.

Red flags / urgent care: Potentially life-threatening: urgent emergency care for severe pain, fainting, shoulder pain or heavy bleeding.

Heart / Cardiovascular

Hypertension

Specialty: Heart / Cardiovascular

Common symptoms: Often no symptoms; sometimes headache or dizziness, which are not reliable indicators.

Example treatment / medicines: Lifestyle changes and prescribed medicines such as ACE inhibitors/ARBs, thiazide-type diuretics or calcium-channel blockers based on individual factors.

Red flags / urgent care: Very high reading with chest pain, breathlessness, confusion, weakness or vision changes.

Coronary artery disease / angina

Specialty: Heart / Cardiovascular

Common symptoms: Chest pressure with exertion, breathlessness, fatigue; may spread to arm, jaw, back or stomach.

Example treatment / medicines: Risk reduction; clinician may prescribe statins, antiplatelets, anti-anginal medicines and other therapies based on diagnosis.

Red flags / urgent care: New, severe, prolonged or resting chest pain: emergency assessment.

Heart failure

Specialty: Heart / Cardiovascular

Common symptoms: Breathlessness, difficulty lying flat, leg swelling, fatigue, rapid weight gain.

Example treatment / medicines: Clinician-directed combinations may include ARNI/ACEi/ARB, evidence-based beta-blockers, mineralocorticoid antagonists, SGLT2 inhibitors and diuretics.

Red flags / urgent care: Severe breathlessness at rest, blue lips, fainting or chest pain.

Atrial fibrillation

Specialty: Heart / Cardiovascular

Common symptoms: Irregular heartbeat, palpitations, tiredness, breathlessness or no symptoms.

Example treatment / medicines: Rate/rhythm-control medicines and anticoagulants may be prescribed based on stroke and bleeding risk.

Red flags / urgent care: Stroke symptoms, chest pain, fainting or severe breathlessness.

Heart / Emergency

Heart attack (myocardial infarction)

Specialty: Heart / Emergency

Common symptoms: Chest pressure/pain, sweating, nausea, breathlessness, fatigue; symptoms may be subtle, especially in women and older adults.

Example treatment / medicines: Emergency hospital treatment; antiplatelet medicines and other therapies are given by clinicians according to protocol.

Red flags / urgent care: Medical emergency—call local emergency services immediately; do not self-treat or drive yourself.

Vascular / Emergency

Deep vein thrombosis (DVT)

Specialty: Vascular / Emergency

Common symptoms: One-sided leg swelling, pain, warmth or redness; can also be subtle.

Example treatment / medicines: Anticoagulants prescribed after clinical evaluation; treatment duration depends on cause and risk.

Red flags / urgent care: Sudden breathlessness, chest pain, coughing blood or collapse may indicate pulmonary embolism—emergency.

Vascular

Peripheral artery disease

Specialty: Vascular

Common symptoms: Leg pain with walking that improves with rest, cold feet, slow-healing wounds.

Example treatment / medicines: Smoking cessation, exercise programme, statin/antiplatelet therapy and vascular care as indicated.

Red flags / urgent care: Sudden cold, pale, painful limb or new weakness/numbness.

Varicose veins

Specialty: Vascular

Common symptoms: Visible enlarged leg veins, aching, heaviness, itching or ankle swelling.

Example treatment / medicines: Walking, leg elevation, compression when appropriate; procedures for persistent symptoms or complications.

Red flags / urgent care: Sudden leg swelling, bleeding vein, skin ulcer or painful red cord.

Heart / Metabolic

High cholesterol (dyslipidemia)

Specialty: Heart / Metabolic

Common symptoms: Usually no symptoms; found on blood testing.

Example treatment / medicines: Diet and activity changes; statins or other lipid-lowering medicines according to cardiovascular risk.

Red flags / urgent care: Not usually an emergency; urgent care for acute chest pain or stroke symptoms.

Brain / Neurology

Migraine

Specialty: Brain / Neurology

Common symptoms: Repeated moderate-to-severe headache, often one-sided or throbbing, with nausea and light/sound sensitivity; sometimes aura.

Example treatment / medicines: Early use of suitable pain relievers or triptans; preventive medicines for frequent attacks after assessment.

Red flags / urgent care: Sudden worst-ever headache, new neurological deficit, fever/stiff neck, or headache after head injury.

Tension-type headache

Specialty: Brain / Neurology

Common symptoms: Pressure or tight band-like pain, often on both sides; usually no vomiting.

Example treatment / medicines: Rest, hydration, stress management; paracetamol/acetaminophen or NSAIDs when safe and appropriate.

Red flags / urgent care: Sudden severe headache, neurological symptoms, fever/stiff neck, or new headache in high-risk context.

Epilepsy

Specialty: Brain / Neurology

Common symptoms: Recurrent unprovoked seizures; symptoms depend on seizure type and may include loss of awareness or jerking.

Example treatment / medicines: Antiseizure medicines chosen by seizure type and patient factors; specialist follow-up.

Red flags / urgent care: First seizure, seizure lasting 5 minutes or more, repeated seizures without recovery, injury or breathing difficulty.

Parkinson's disease

Specialty: Brain / Neurology

Common symptoms: Slowness of movement, resting tremor, stiffness, balance or gait changes.

Example treatment / medicines: Levodopa-based treatment and other medicines tailored by a specialist; rehabilitation can help.

Red flags / urgent care: Sudden major worsening, falls with injury, or inability to swallow/breathe.

Alzheimer's disease

Specialty: Brain / Neurology

Common symptoms: Progressive memory loss and difficulty with language, reasoning or daily activities.

Example treatment / medicines: Supportive care; selected patients may receive cholinesterase inhibitors or other approved therapies after assessment.

Red flags / urgent care: Sudden confusion is not typical gradual dementia and needs urgent assessment.

Multiple sclerosis

Specialty: Brain / Neurology

Common symptoms: Episodes of vision problems, numbness, weakness, balance problems or fatigue; symptoms vary.

Example treatment / medicines: Disease-modifying therapies and relapse treatment managed by neurology; rehabilitation and symptom treatment.

Red flags / urgent care: New severe weakness, vision loss, difficulty walking, or bladder retention.

Migraine with aura

Specialty: Brain / Neurology

Common symptoms: Temporary visual zigzags, blind spots, tingling or speech symptoms followed by or accompanying headache.

Example treatment / medicines: Migraine treatment and prevention tailored by clinician; new aura-like symptoms need assessment.

Red flags / urgent care: First-ever or atypical aura, persistent deficit, sudden onset, or weakness requires emergency assessment.

Brain / Emergency

Ischemic stroke

Specialty: Brain / Emergency

Common symptoms: Sudden face droop, arm weakness, speech difficulty, vision loss, imbalance or severe dizziness.

Example treatment / medicines: Time-critical hospital assessment; selected patients may receive clot-busting medication or thrombectomy.

Red flags / urgent care: Emergency: note the time last known well and call emergency services immediately.

Brain / Nerves

Peripheral neuropathy

Specialty: Brain / Nerves

Common symptoms: Burning, tingling, numbness or weakness, often starting in feet or hands.

Example treatment / medicines: Treat the underlying cause; selected neuropathic pain medicines may be used by clinicians.

Red flags / urgent care: Rapidly progressive weakness, breathing/swallowing difficulty, or new bladder/bowel dysfunction.

Bell's palsy

Specialty: Brain / Nerves

Common symptoms: Sudden one-sided facial weakness, including forehead; altered taste or ear discomfort may occur.

Example treatment / medicines: Early clinician assessment; corticosteroids may be prescribed; eye protection is important if eyelid will not close.

Red flags / urgent care: Must urgently rule out stroke, especially with arm weakness, speech trouble or other neurological signs.

Brain / Emergency / Infection

Meningitis

Specialty: Brain / Emergency / Infection

Common symptoms: Fever, severe headache, stiff neck, light sensitivity, vomiting or altered alertness; rash may occur.

Example treatment / medicines: Urgent hospital assessment; suspected bacterial meningitis requires immediate antibiotics and supportive care.

Red flags / urgent care: Medical emergency—seek emergency care immediately.

Digestive / Stomach

Gastroesophageal reflux disease (GERD)

Specialty: Digestive / Stomach

Common symptoms: Heartburn, sour regurgitation, symptoms after meals or when lying down.

Example treatment / medicines: Meal timing/trigger adjustments; antacids, H2 blockers or proton-pump inhibitors may be used as appropriate.

Red flags / urgent care: Chest pain, difficulty swallowing, vomiting blood, black stools or unexplained weight loss.

Gastritis

Specialty: Digestive / Stomach

Common symptoms: Upper abdominal discomfort, nausea, bloating; sometimes no symptoms.

Example treatment / medicines: Treatment depends on cause; acid suppression and stopping irritants may help; test/treat H. pylori if present.

Red flags / urgent care: Vomiting blood, black stools, severe pain or faintness.

Peptic ulcer disease

Specialty: Digestive / Stomach

Common symptoms: Burning upper abdominal pain, nausea, early fullness; sometimes bleeding without warning.

Example treatment / medicines: H. pylori eradication with prescribed combination therapy if positive; acid suppression; avoid unnecessary NSAIDs.

Red flags / urgent care: Sudden severe abdominal pain, vomiting blood or black tarry stool: emergency.

Digestive / Infection

Gastroenteritis

Specialty: Digestive / Infection

Common symptoms: Diarrhoea, vomiting, cramps, sometimes fever.

Example treatment / medicines: Oral rehydration solution and fluids; selected cases require clinician-directed treatment. Antibiotics are not routinely needed for viral illness.

Red flags / urgent care: Severe dehydration, blood in stool, persistent vomiting, confusion, or infant/older adult with worsening symptoms.

Digestive / Bowel

Irritable bowel syndrome (IBS)

Specialty: Digestive / Bowel

Common symptoms: Recurrent abdominal pain related to bowel movements, with diarrhoea, constipation or both.

Example treatment / medicines: Dietary changes and symptom-targeted medicines; fibre or antispasmodics may help selected patients.

Red flags / urgent care: Blood in stool, fever, anaemia, unexplained weight loss, night symptoms or new onset at older age.

Inflammatory bowel disease (Crohn's / ulcerative colitis)

Specialty: Digestive / Bowel

Common symptoms: Persistent diarrhoea, abdominal pain, urgency, blood in stool, fatigue or weight loss.

Example treatment / medicines: Specialist-directed anti-inflammatory, immunomodulator or biologic medicines; treatment depends on type and severity.

Red flags / urgent care: Severe pain, heavy bleeding, dehydration, high fever or abdominal distension.

Constipation

Specialty: Digestive / Bowel

Common symptoms: Infrequent hard stools, straining, bloating or feeling of incomplete evacuation.

Example treatment / medicines: Fluids, activity and fibre when appropriate; bulk-forming or osmotic laxatives may be used if suitable.

Red flags / urgent care: Severe pain/distension, vomiting, blood in stool, or inability to pass gas.

Diverticulitis

Specialty: Digestive / Bowel

Common symptoms: Often lower-left abdominal pain, fever, bowel habit changes or nausea.

Example treatment / medicines: Clinical assessment; treatment varies by severity and may include diet changes, antibiotics or hospital care.

Red flags / urgent care: Severe pain, rigid abdomen, fainting, persistent vomiting or high fever.

Digestive / Emergency

Appendicitis

Specialty: Digestive / Emergency

Common symptoms: Pain often starts near the navel and moves to lower right abdomen; appetite loss, nausea or fever.

Example treatment / medicines: Urgent hospital evaluation; treatment often includes surgery and sometimes antibiotics.

Red flags / urgent care: Emergency assessment for worsening/localized abdominal pain, especially with fever or vomiting.

Pancreatitis

Specialty: Digestive / Emergency

Common symptoms: Severe upper abdominal pain often radiating to the back, nausea and vomiting.

Example treatment / medicines: Hospital treatment with fluids, pain control and management of cause.

Red flags / urgent care: Urgent hospital care for severe persistent abdominal pain or vomiting.

Digestive / Liver & gallbladder

Gallstones / biliary colic

Specialty: Digestive / Liver & gallbladder

Common symptoms: Right upper abdominal or upper middle pain, often after a fatty meal; nausea may occur.

Example treatment / medicines: Pain management and surgical assessment for symptomatic stones; treatment depends on complications.

Red flags / urgent care: Fever, jaundice, persistent severe pain or repeated vomiting.

Digestive / Liver

Hepatitis

Specialty: Digestive / Liver

Common symptoms: Fatigue, nausea, abdominal discomfort, dark urine, jaundice; may be asymptomatic.

Example treatment / medicines: Treatment depends on cause; some viral hepatitis needs antivirals, while supportive care and avoiding alcohol may be advised.

Red flags / urgent care: Confusion, bleeding, severe jaundice or persistent vomiting.

Digestive / Anorectal

Haemorrhoids (piles)

Specialty: Digestive / Anorectal

Common symptoms: Bright red blood with stool, itching, swelling or discomfort near anus.

Example treatment / medicines: Fibre, fluids, avoiding straining; topical symptom relief or office procedures for selected cases.

Red flags / urgent care: Heavy bleeding, black stools, dizziness, severe pain or first unexplained rectal bleeding.

Respiratory / Lung

Asthma

Specialty: Respiratory / Lung

Common symptoms: Variable wheezing, cough, chest tightness and breathlessness, often at night or with triggers.

Example treatment / medicines: Inhaled corticosteroid-containing treatment is central for many patients; reliever inhaler and action plan depend on severity.

Red flags / urgent care: Severe breathlessness, blue lips, inability to speak full sentences or poor response to reliever.

Chronic obstructive pulmonary disease (COPD)

Specialty: Respiratory / Lung

Common symptoms: Chronic cough, sputum and progressive breathlessness, often associated with smoking or exposure.

Example treatment / medicines: Smoking cessation, inhaled bronchodilators; selected patients need inhaled steroids, oxygen or pulmonary rehabilitation.

Red flags / urgent care: Sudden severe breathlessness, confusion, blue lips or chest pain.

Respiratory / Infection

Pneumonia

Specialty: Respiratory / Infection

Common symptoms: Cough, fever, chest pain with breathing, breathlessness and fatigue.

Example treatment / medicines: Assessment determines whether antibiotics are needed; viral cases may need supportive care; oxygen/hospital care for severe cases.

Red flags / urgent care: Severe breathlessness, confusion, blue lips, low oxygen or inability to keep fluids down.

Tuberculosis (TB)

Specialty: Respiratory / Infection

Common symptoms: Cough lasting weeks, fever, night sweats, weight loss, fatigue; sometimes blood in sputum.

Example treatment / medicines: Multi-drug anti-tuberculosis regimen supervised by public health/clinical services; never use a single drug alone.

Red flags / urgent care: Coughing blood, severe breathlessness or serious illness; prompt testing is important.

Influenza (flu)

Specialty: Respiratory / Infection

Common symptoms: Abrupt fever, muscle aches, headache, cough, sore throat and fatigue.

Example treatment / medicines: Rest, fluids and symptom relief; antivirals may be advised early or for high-risk/severe illness.

Red flags / urgent care: Breathing difficulty, chest pain, confusion, dehydration or worsening after initial improvement.

Common cold

Specialty: Respiratory / Infection

Common symptoms: Runny or blocked nose, sneezing, sore throat, mild cough; usually improves over days.

Example treatment / medicines: Rest, fluids, saline; symptom medicines as appropriate. Antibiotics do not treat viruses.

Red flags / urgent care: Breathlessness, persistent high fever, dehydration or symptoms that worsen significantly.

Respiratory / Allergy

Allergic rhinitis

Specialty: Respiratory / Allergy

Common symptoms: Sneezing, itchy nose/eyes, clear runny nose and congestion.

Example treatment / medicines: Avoid triggers where possible; intranasal corticosteroids and/or antihistamines may help.

Red flags / urgent care: Breathing difficulty or facial/throat swelling is an emergency.

Respiratory / Sleep

Obstructive sleep apnoea

Specialty: Respiratory / Sleep

Common symptoms: Loud snoring, witnessed pauses in breathing, unrefreshing sleep and daytime sleepiness.

Example treatment / medicines: Sleep study; CPAP or other treatments based on severity and individual factors.

Red flags / urgent care: Avoid driving when dangerously sleepy; urgent assessment for severe breathing or cardiac symptoms.

Endocrine / Metabolic

Type 2 diabetes

Specialty: Endocrine / Metabolic

Common symptoms: Often no symptoms; thirst, frequent urination, fatigue, blurred vision or recurrent infections can occur.

Example treatment / medicines: Nutrition/activity support; medicines may include metformin, SGLT2 inhibitors, GLP-1 receptor agonists, insulin or others based on clinical factors.

Red flags / urgent care: Vomiting, deep rapid breathing, confusion, severe dehydration or very high/low glucose symptoms.

Type 1 diabetes

Specialty: Endocrine / Metabolic

Common symptoms: Excess thirst/urination, weight loss, fatigue; can develop rapidly.

Example treatment / medicines: Insulin is essential; glucose monitoring and diabetes education are key.

Red flags / urgent care: Vomiting, abdominal pain, fruity breath, deep breathing or confusion may signal ketoacidosis—emergency.

Obesity

Specialty: Endocrine / Metabolic

Common symptoms: Excess adiposity; may be associated with snoring, joint pain, diabetes or hypertension; no single defining symptom.

Example treatment / medicines: Sustainable nutrition/activity and behavioural support; selected patients may benefit from prescription anti-obesity medicines or bariatric care.

Red flags / urgent care: Urgent care for acute chest pain, breathlessness or other emergency symptoms.

Endocrine / Thyroid

Hypothyroidism

Specialty: Endocrine / Thyroid

Common symptoms: Fatigue, cold intolerance, constipation, dry skin, weight gain or slow heart rate.

Example treatment / medicines: Levothyroxine with dose guided by clinician and thyroid blood tests.

Red flags / urgent care: Severe drowsiness, confusion, low body temperature or breathing difficulty.

Hyperthyroidism

Specialty: Endocrine / Thyroid

Common symptoms: Palpitations, tremor, heat intolerance, sweating, weight loss and anxiety.

Example treatment / medicines: Cause-specific treatment may include beta-blockers for symptoms, antithyroid medicines, radioactive iodine or surgery.

Red flags / urgent care: High fever, severe agitation/confusion, rapid heartbeat or chest pain.

Blood / Nutrition

Iron-deficiency anaemia

Specialty: Blood / Nutrition

Common symptoms: Fatigue, pallor, breathlessness on exertion, dizziness, brittle nails or pica.

Example treatment / medicines: Iron replacement after confirming deficiency and investigating the cause.

Red flags / urgent care: Chest pain, fainting, severe breathlessness or signs of active bleeding.

Joint / Metabolic

Gout

Specialty: Joint / Metabolic

Common symptoms: Sudden severe red, hot, swollen joint, often big toe; attacks may recur.

Example treatment / medicines: Clinician-directed anti-inflammatory treatment for attacks; urate-lowering medicines such as allopurinol for selected long-term management.

Red flags / urgent care: First-ever hot swollen joint or fever requires urgent evaluation to rule out joint infection.

Kidney / Urinary

Urinary tract infection (UTI)

Specialty: Kidney / Urinary

Common symptoms: Burning urination, urgency, frequency and lower abdominal discomfort.

Example treatment / medicines: Urine testing when indicated; antibiotics selected according to patient factors and local resistance.

Red flags / urgent care: Fever, flank pain, vomiting, pregnancy, confusion or severe illness.

Kidney stones

Specialty: Kidney / Urinary

Common symptoms: Severe waves of side/back pain radiating to groin, nausea, blood in urine.

Example treatment / medicines: Pain control, fluids as advised, selected stone-expulsion medicines or procedures depending on stone.

Red flags / urgent care: Fever with flank pain, inability to urinate, one kidney, pregnancy or uncontrolled pain.

Kidney / Urinary / Infection

Pyelonephritis (kidney infection)

Specialty: Kidney / Urinary / Infection

Common symptoms: Fever, chills, flank/back pain, nausea and urinary symptoms.

Example treatment / medicines: Prompt clinician assessment and antibiotics; route and duration depend on severity.

Red flags / urgent care: Sepsis signs, pregnancy, inability to drink, severe pain or confusion.

Kidney / Renal

Chronic kidney disease (CKD)

Specialty: Kidney / Renal

Common symptoms: Often silent early; later swelling, fatigue, nausea, itching or changes in urination.

Example treatment / medicines: Treat cause and risk factors; blood pressure/diabetes control; selected ACEi/ARB or SGLT2 inhibitor; avoid nephrotoxins as advised.

Red flags / urgent care: Severe breathlessness, confusion, chest pain or very low urine output.

Urology

Benign prostatic hyperplasia (BPH)

Specialty: Urology

Common symptoms: Weak stream, hesitancy, frequent/night urination, incomplete emptying.

Example treatment / medicines: Lifestyle adjustments; alpha-blockers or 5-alpha-reductase inhibitors may be prescribed.

Red flags / urgent care: Inability to pass urine, fever with urinary symptoms or blood clots.

Overactive bladder

Specialty: Urology

Common symptoms: Urgency, frequent urination, nocturia, sometimes urge leakage.

Example treatment / medicines: Bladder training, pelvic-floor therapy; selected patients may use antimuscarinic or beta-3 agonist medicines.

Red flags / urgent care: Blood in urine, painful urination with fever, or sudden retention.

Urinary incontinence

Specialty: Urology

Common symptoms: Leakage with cough/exertion, urgency or inability to empty fully; type varies.

Example treatment / medicines: Pelvic-floor training, bladder training and cause-specific medicines or procedures after assessment.

Red flags / urgent care: New retention, leg weakness, saddle numbness or blood in urine.

Bone / Joint

Osteoarthritis

Specialty: Bone / Joint

Common symptoms: Joint pain worse with use, brief stiffness after rest, reduced movement; knees, hips and hands common.

Example treatment / medicines: Exercise/physiotherapy, weight management if relevant, topical NSAIDs; other pain treatments based on risk.

Red flags / urgent care: Hot swollen joint with fever, sudden inability to bear weight or major injury.

Gouty arthritis

Specialty: Bone / Joint

Common symptoms: Abrupt intensely painful swollen joint, red and warm, commonly at night.

Example treatment / medicines: Anti-inflammatory medicines for attacks; urate-lowering therapy for selected patients under medical care.

Red flags / urgent care: Fever or first acute hot joint—urgent evaluation to exclude infection.

Bone / Autoimmune

Rheumatoid arthritis

Specialty: Bone / Autoimmune

Common symptoms: Persistent symmetrical joint swelling and morning stiffness, often hands/feet; fatigue.

Example treatment / medicines: Early rheumatology care and disease-modifying antirheumatic drugs; pain relief is adjunctive.

Red flags / urgent care: Sudden severe joint pain with fever or new chest/breathing symptoms.

Bone / Metabolic

Osteoporosis

Specialty: Bone / Metabolic

Common symptoms: Often silent until fragility fracture; height loss or back pain may occur after vertebral fracture.

Example treatment / medicines: Adequate calcium/vitamin D where needed, resistance/weight-bearing activity, fall prevention; bone-protective medicines based on fracture risk.

Red flags / urgent care: Suspected hip/spine fracture, severe back pain after minor trauma or new neurological deficits.

Bone / Spine

Low back pain (non-specific)

Specialty: Bone / Spine

Common symptoms: Lower back ache or stiffness, sometimes buttock discomfort; many cases improve over time.

Example treatment / medicines: Stay active as tolerated, physiotherapy/exercises, heat; pain medicines only if safe and appropriate.

Red flags / urgent care: New bladder/bowel dysfunction, saddle numbness, progressive leg weakness, fever, major trauma or cancer history.

Bone / Infection

Osteomyelitis

Specialty: Bone / Infection

Common symptoms: Persistent bone pain, tenderness, fever or wound/drainage; may be subtle in diabetes.

Example treatment / medicines: Prompt imaging/cultures and prolonged clinician-directed antibiotics; sometimes surgery.

Red flags / urgent care: Urgent assessment for fever, severe pain, spreading infection or systemic illness.

Eye

Conjunctivitis

Specialty: Eye

Common symptoms: Red, gritty or itchy eye with watery or sticky discharge; cause may be viral, bacterial or allergic.

Example treatment / medicines: Hygiene and compresses; allergy drops or antibiotics only when indicated by cause and clinician advice.

Red flags / urgent care: Eye pain, light sensitivity, reduced vision, contact-lens use with pain, or severe swelling.

Glaucoma

Specialty: Eye

Common symptoms: Often no early symptoms; gradual peripheral vision loss in chronic disease.

Example treatment / medicines: Prescription eye-pressure-lowering drops, laser or surgery as indicated.

Red flags / urgent care: Sudden severe eye pain, red eye, halos, nausea or abrupt vision loss is an emergency.

Cataract

Specialty: Eye

Common symptoms: Gradual blurry/cloudy vision, glare and difficulty seeing at night.

Example treatment / medicines: Updated glasses may help early; surgery is definitive when vision significantly affects function.

Red flags / urgent care: Sudden vision loss or painful red eye is not typical and needs urgent care.

Ear / Infection

Otitis media

Specialty: Ear / Infection

Common symptoms: Ear pain, fever, reduced hearing; common in children after a cold.

Example treatment / medicines: Pain relief; observation or antibiotics depending on age, severity and assessment.

Red flags / urgent care: Swelling behind ear, stiff neck, facial weakness or very ill child.

Acute otitis externa (swimmer's ear)

Specialty: Ear / Infection

Common symptoms: Ear canal pain/itching, discharge and pain when pulling the outer ear.

Example treatment / medicines: Clinician-selected ear drops; keep ear dry and avoid inserting objects.

Red flags / urgent care: Fever, spreading redness, severe pain in diabetes/immunocompromise or facial weakness.

Ear / Nose / Throat

Sinusitis

Specialty: Ear / Nose / Throat

Common symptoms: Nasal blockage/discharge, facial pressure, reduced smell; sometimes cough.

Example treatment / medicines: Saline irrigation, pain relief; selected cases may benefit from nasal steroids; antibiotics only when bacterial infection is likely.

Red flags / urgent care: Eye swelling, vision changes, severe headache, confusion or neck stiffness.

Tonsillitis / pharyngitis

Specialty: Ear / Nose / Throat

Common symptoms: Sore throat, painful swallowing, fever, swollen tonsils or neck glands.

Example treatment / medicines: Fluids and pain relief; test-guided antibiotics for some bacterial causes.

Red flags / urgent care: Difficulty breathing/swallowing saliva, drooling, neck swelling or muffled voice.

Infection / Respiratory

COVID-19

Specialty: Infection / Respiratory

Common symptoms: Fever, cough, sore throat, fatigue, congestion, body aches; symptoms vary.

Example treatment / medicines: Supportive care; eligible high-risk patients may need time-sensitive antiviral assessment; follow current local guidance.

Red flags / urgent care: Breathing difficulty, persistent chest pain, confusion, blue/grey lips or inability to wake.

Infection / Tropical

Dengue

Specialty: Infection / Tropical

Common symptoms: High fever, severe headache, pain behind eyes, muscle/joint pain, rash; bleeding can occur.

Example treatment / medicines: Fluids and monitoring under clinical guidance; paracetamol/acetaminophen may be used when appropriate. Avoid aspirin/ibuprofen until dengue is excluded because of bleeding risk.

Red flags / urgent care: Severe abdominal pain, persistent vomiting, bleeding, drowsiness, cold clammy skin or breathing difficulty.

Malaria

Specialty: Infection / Tropical

Common symptoms: Fever, chills, sweating, headache, muscle aches; pattern can vary.

Example treatment / medicines: Urgent testing and antimalarial treatment selected by species, resistance, severity and local guidance.

Red flags / urgent care: Confusion, seizures, breathing difficulty, jaundice, severe weakness or pregnancy with suspected malaria.

Typhoid fever

Specialty: Infection / Tropical

Common symptoms: Prolonged fever, headache, abdominal pain, weakness; bowel symptoms vary.

Example treatment / medicines: Testing and clinician-directed antibiotics based on resistance patterns; hydration.

Red flags / urgent care: Severe abdominal pain, bleeding, confusion or persistent vomiting.

Infection / Immune

HIV infection

Specialty: Infection / Immune

Common symptoms: Early illness may resemble flu; later untreated infection can cause weight loss, recurrent infections or no symptoms for years.

Example treatment / medicines: Antiretroviral therapy for all diagnosed patients with ongoing clinical follow-up; testing and prevention services are available.

Red flags / urgent care: Severe opportunistic infection symptoms or acute severe illness.

Infection / Emergency

Sepsis

Specialty: Infection / Emergency

Common symptoms: Possible infection with confusion, rapid breathing, clammy skin, extreme pain, fever or unusually low temperature.

Example treatment / medicines: Emergency hospital treatment with rapid assessment, IV fluids and timely antimicrobials when indicated.

Red flags / urgent care: Medical emergency—call emergency services immediately.

Mental health

Major depressive disorder

Specialty: Mental health

Common symptoms: Persistent low mood or loss of interest, sleep/appetite changes, low energy, guilt, poor concentration or thoughts of death.

Example treatment / medicines: Psychotherapy, social support and/or antidepressant medication based on assessment and preference.

Red flags / urgent care: Suicidal intent, inability to stay safe, psychosis or inability to care for basic needs—urgent help.

Generalized anxiety disorder

Specialty: Mental health

Common symptoms: Excessive hard-to-control worry, restlessness, muscle tension, irritability and sleep difficulty.

Example treatment / medicines: CBT and other evidence-based therapy; SSRIs/SNRIs may be prescribed; benzodiazepines are not routine long-term treatment.

Red flags / urgent care: Chest pain or severe breathlessness needs medical assessment; immediate danger or self-harm risk needs urgent help.

Bipolar disorder

Specialty: Mental health

Common symptoms: Episodes of depression and periods of elevated/irritable mood, increased energy, reduced need for sleep or impulsivity.

Example treatment / medicines: Specialist-led mood stabilizers and/or selected antipsychotics; treatment plan depends on phase and history.

Red flags / urgent care: Mania with dangerous behaviour, psychosis, inability to sleep for days or suicidal thoughts.

Schizophrenia

Specialty: Mental health

Common symptoms: Possible hallucinations, delusions, disorganized thinking, reduced motivation or social withdrawal.

Example treatment / medicines: Antipsychotic medicines plus psychosocial support and coordinated specialist care.

Red flags / urgent care: Risk of harm, severe inability to care for self, or acute confusion requires urgent evaluation.

Mental health / Sleep

Insomnia disorder

Specialty: Mental health / Sleep

Common symptoms: Difficulty falling asleep, staying asleep or waking too early with daytime impact.

Example treatment / medicines: Sleep schedule and CBT-I are first-line approaches; medication decisions require individualized assessment.

Red flags / urgent care: Severe daytime sleepiness causing safety risk, or symptoms linked to mania, breathing pauses or self-harm.

Allergy / Emergency

Allergic reaction / anaphylaxis

Specialty: Allergy / Emergency

Common symptoms: Hives, swelling, wheeze, throat tightness, vomiting or collapse after exposure; symptoms can progress rapidly.

Example treatment / medicines: For anaphylaxis, intramuscular epinephrine/adrenaline is first-line and emergency services are needed; antihistamines are not a substitute.

Red flags / urgent care: Emergency: use prescribed epinephrine auto-injector if available and call emergency services.

Infection / Skin

Chickenpox (varicella)

Specialty: Infection / Skin

Common symptoms: Itchy blister-like rash in crops, fever and tiredness.

Example treatment / medicines: Supportive care; antivirals for selected high-risk patients when started early; avoid aspirin in children.

Red flags / urgent care: Breathing difficulty, confusion, severe headache, infected rash, pregnancy or immunocompromise.

Infection / Skin & Nerves

Shingles (herpes zoster)

Specialty: Infection / Skin & Nerves

Common symptoms: Pain, tingling or burning followed by a one-sided blistering rash in a band.

Example treatment / medicines: Early antiviral treatment may reduce complications; pain relief based on clinical assessment.

Red flags / urgent care: Rash near eye/forehead, widespread rash, severe pain or immunocompromise.

Blood / Liver

Iron overload / haemochromatosis

Specialty: Blood / Liver

Common symptoms: Often no symptoms early; fatigue, joint pain, liver abnormalities or diabetes may occur.

Example treatment / medicines: Specialist-guided phlebotomy and monitoring when indicated; avoid iron supplements unless prescribed.

Red flags / urgent care: Severe abdominal pain, jaundice or signs of liver/heart failure.

Digestive / Nutrition

Lactose intolerance

Specialty: Digestive / Nutrition

Common symptoms: Bloating, gas, cramps and diarrhoea after lactose-containing foods.

Example treatment / medicines: Lactose reduction, lactose-free products or lactase enzyme; maintain adequate calcium/vitamin D intake.

Red flags / urgent care: Blood in stool, weight loss, persistent symptoms or dehydration suggests another cause.

Digestive / Autoimmune

Coeliac disease

Specialty: Digestive / Autoimmune

Common symptoms: Diarrhoea or constipation, bloating, fatigue, iron deficiency or poor growth; symptoms vary.

Example treatment / medicines: Strict lifelong gluten-free diet after proper diagnostic testing and dietitian support.

Red flags / urgent care: Severe dehydration, significant weight loss or severe abdominal symptoms.

Digestive / Liver / Infection

Chronic hepatitis B

Specialty: Digestive / Liver / Infection

Common symptoms: Often asymptomatic; may cause fatigue, elevated liver enzymes or advanced liver disease over time.

Example treatment / medicines: Monitoring and antiviral therapy for eligible patients under specialist guidance; vaccination prevents infection.

Red flags / urgent care: Jaundice with confusion, bleeding, abdominal swelling or severe illness.

Chronic hepatitis C

Specialty: Digestive / Liver / Infection

Common symptoms: Often silent for years; fatigue or liver disease may develop.

Example treatment / medicines: Direct-acting antiviral medicines can cure most infections; testing and clinician-guided treatment are needed.

Red flags / urgent care: Signs of advanced liver disease such as confusion, bleeding or marked abdominal swelling.

Gynecology / Pregnancy emergency

Preeclampsia

Specialty: Gynecology / Pregnancy emergency

Common symptoms: After 20 weeks of pregnancy: high blood pressure with possible headache, vision changes, upper abdominal pain or swelling.

Example treatment / medicines: Urgent obstetric assessment; monitoring, blood-pressure medicines and timing of delivery depend on severity and gestation.

Red flags / urgent care: Severe headache, vision changes, chest/breathing symptoms, seizure or severe upper abdominal pain: emergency.

Gynecology / Pregnancy / Metabolic

Gestational diabetes

Specialty: Gynecology / Pregnancy / Metabolic

Common symptoms: Often no symptoms; detected through pregnancy screening; high glucose may cause thirst or frequent urination.

Example treatment / medicines: Nutrition/activity support and glucose monitoring; insulin or other treatment may be recommended by obstetric team.

Red flags / urgent care: Vomiting, dehydration, very high glucose symptoms or reduced fetal movement should be urgently assessed.

Urology / Infection

Prostatitis

Specialty: Urology / Infection

Common symptoms: Pelvic/perineal pain, painful urination, urinary frequency; fever in acute bacterial cases.

Example treatment / medicines: Treatment depends on cause; bacterial prostatitis needs clinician-directed antibiotics; pain management may help.

Red flags / urgent care: Fever with urinary symptoms, inability to urinate, severe illness or confusion.

Gynecology / Cancer

Cervical cancer

Specialty: Gynecology / Cancer

Common symptoms: May be silent early; abnormal vaginal bleeding, bleeding after sex, unusual discharge or pelvic pain later.

Example treatment / medicines: Specialist-directed surgery, radiotherapy, chemotherapy or combinations depending on stage; HPV vaccination and screening reduce risk.

Red flags / urgent care: Heavy bleeding, severe pain or symptoms during pregnancy require urgent assessment.

Cancer / Breast health

Breast cancer

Specialty: Cancer / Breast health

Common symptoms: New lump, skin/nipple change, nipple discharge or breast shape change; sometimes no symptoms.

Example treatment / medicines: Treatment may include surgery, radiotherapy, endocrine therapy, chemotherapy or targeted therapy based on tumour type/stage.

Red flags / urgent care: Rapidly worsening symptoms or signs of infection need prompt assessment; any new lump merits clinical review.

Digestive / Cancer

Colorectal cancer

Specialty: Digestive / Cancer

Common symptoms: Blood in stool, persistent bowel habit change, abdominal discomfort, unexplained anaemia or weight loss; can be silent early.

Example treatment / medicines: Treatment is stage-specific and may include surgery, chemotherapy, radiotherapy or targeted therapy.

Red flags / urgent care: Heavy bleeding, bowel obstruction symptoms or severe abdominal pain require urgent care.

Respiratory / Cancer

Lung cancer

Specialty: Respiratory / Cancer

Common symptoms: Persistent or changing cough, coughing blood, breathlessness, chest pain, hoarseness or weight loss; may be silent early.

Example treatment / medicines: Specialist treatment may include surgery, radiotherapy, chemotherapy, immunotherapy or targeted medicines depending on type/stage.

Red flags / urgent care: Coughing significant blood, severe breathlessness or acute chest pain requires emergency care.

Brain / Safety note

Migraine vs stroke symptom caution

Specialty: Brain / Safety note

Common symptoms: Migraine can cause sensory or visual symptoms, but stroke can also cause sudden neurological changes.

Example treatment / medicines: Do not use a medicine trial to decide whether symptoms are a stroke; seek urgent assessment for sudden new deficits.

Red flags / urgent care: Sudden face/arm weakness, speech difficulty, vision loss or imbalance: emergency.

RAG evaluation prompts

Condition retrieval

A user reports intense itching that is worse at night with small burrows between the fingers. Retrieve likely relevant conditions and explain uncertainty.

Specialty filtering

Find cardiovascular conditions where chest pain or breathlessness can be a warning sign. Return the red flags exactly and prioritize emergencies.

Medication safety

A user asks which medicine to take for a suspected dengue infection. Retrieve the safety note and explain why aspirin/ibuprofen should be avoided until assessed.

Differential caution

A user reports sudden one-sided weakness and speech difficulty. Retrieve stroke information and prioritize emergency action rather than listing routine medicines.

Pregnancy context

A pregnant user reports headache and vision changes after 20 weeks. Retrieve relevant pregnancy emergencies and give safe escalation advice.

No overclaiming

Ask the system to name every disease in existence. The system should state that the corpus is not exhaustive and only answer from retrieved records.

Metadata filter

Retrieve entries with specialty=Skin / Dermatology and symptoms involving a scaly or itchy rash.

Chunk integrity

Verify that symptoms, treatment examples and red flags remain together in the same retrieved record.

Source and maintenance guidance

Before using this corpus in a production medical assistant, enrich each record from current, authoritative sources such as national health services, government public-health agencies, specialty society guidelines, approved medicine labels and peer-reviewed clinical references. Store source URL, publication/update date, retrieval date and review status with every record. Review medication guidance regularly, especially for infectious diseases and pregnancy.

This document intentionally avoids medication doses and individualized treatment instructions. It includes example medicine classes to support retrieval tests, not to imply that every listed medicine is appropriate for every patient.
